Excerpts from a Trap & Field article  
USA SHOOTING—COACH

The gun is an entirely new design. The barrels are built with two monoblocks - one at the muzzle and one at the chamber ... This results in a very rigid receiver which also has a very low profile ...

The monoblock design and the central pins and cones lockup makes for a very low profile receiver, placing the barrels entirely within the front hand and giving straight line recoil, resulting in reduced muzzle flip.

Carbon fiber is used within the fore end, providing great rigidity and strength, yet allowing a very thin fore arm - also important in double trap.

The lock mechanism is unique for an over/under. It is built entirely on the trigger plate ... This makes a compact lock mechanism which is easy to service because the trigger plate can be removed and is interchangeable.

Coil springs and the clean, simple design mean that service will be rarely required. Ignition is achieved through a transfer plate, to deliver a great deal of mass and energy from the hammer to the primer in a straight line and very quickly. The triggers are mechanical with virtually no creep. It looks like a very good package.

**President - Custom Shooting Sports, Inc.**

First impressions after a shooting session at Brays Island Gun Club from:

"The first thing I noticed about the Parker Bros. Over & Under was it's sleek look and VERY low profile.

The low profile benefit was further confirmed as felt recoil is considerably reduced when compared to higher profile guns. The lower profile also positively affects the balance and point ability of this beautiful gun. The innovations in providing this low of a profile in a shotgun is

testament to the amount of work and thought given to the internals of the new Parker Bros. Over & Under."

## New Reliable Over & Under Shotgun - Features & Specifications

- Action - Fully self-contained Triggerplate action, removable (Patent Pending)  
Automatic Ejectors or Extractors only - selectable  
Safety & Selector Toggle - programmable for Auto, Manual, Lock-Out
- Gauge - 12 ga. 2-3/4" standard, 3" optional  
Proportional framed smaller gauges to follow
- Trigger - Single / Mechanical, Adjustable & Removable Ball Lock design (Patent Pending)
- Barrels - Overbore standard with long forcing cones, top rib & regulation per customer  
Adjustable top rib optional  
Cooling fins optional  
Lengths - 26", 28", 30", 32", 34"
- Stock - Fitted to customer with choice of grip style & recoil pad  
Palm swell & adjustable stock optional
- Weight - Weight & balance customization options  
Titanium option
- Grade differences -
  - Wood - NW Am. Black, English, Turkish Walnut selection varies by grade
  - Stock checkering & finish - varies by grade
  - Engraving
    - PA, C, B grades - Factory patterns
    - AA - Factory pattern, custom option
    - A1-Special - Gold inlay & lettering pattern, custom option
    - Invincible - Commissioned engraving
  - Metal finish & jewellery - varies by grade
  - Barrel steel - varies by grade
  - Exclusive metals & finishes - A1 Special & Invincible grades only
